

Richmark Marbats are manufactured in virtually indestructible medium density Polythene. The handle is covered with a non-slip gripping surface.

This product is for daytime use at Airports but is also suitable for accident marshalling by police. Also for daytime car park marshalling at football grounds, racecourses, vehicles on rail and pre shipping car and lorry parking areas where vehicle control is required.

The Richmark Marbat has been designed so that clients can add weights in the handle and/or in the main body of the bat to suit their own preference. The handle is 'overlong' to particularly suit the requirements of Airport Marshallers.
